

Optimus Manufacturing

*Efficiency in Production,
quality for your
customers, Inventory
in real time through
Optimus manufacturing -
Information on the cloud
to aid your business at
every step.*

Track your orders and manage your stock with Optimus Manufacturing. Designed specifically for the Jewellery Industry, Optimus manufacturing does more than business processes integration. Transparency of the workflow and real time status updates across stakeholders within and outside the organisation ensure easy access to information through the product delivery lifecycle.

Central Information Repository

Being a cloud based solution, the central information repository is accessible to all stakeholders irrespective of location. All stakeholders have access to the same information at the same time. Real time status updates lead to a common understanding of production scenarios and decision parameters, ensuring an effective decision making framework.

A Collaborative Platform

Cross functional teams work on Optimus seamlessly managing the manufacturing lifecycle from Sales orders and Procurement till invoicing either to your onsite offices or customers. Integration of onsite offices in the chain allows for seamless stock movement and tracking as well as customer billing.

Design The Cornerstone Of Successful Jewellery Organisation

Design is one of the key components in Jewellery which cannot be driven by standardisation of processes. You need a system that allows both – the space for designers to effectively deliver their creations and implements the framework to analyse effectiveness and efficiency. In Optimus design creativity is aligned with market requirements for effective product development.

Quality, Predictability and Happy Customers

Meeting a customer's expectations consistently every single time, is a challenge faced by every business and yet that is the only way to customer satisfaction. You can improve only what you measure. Optimus manufacturing tracks the parameters that impact quality or efficiency, whether it is Design feasibility, Ease and predictability of production or Employee productivity.

Connected Vendors and Timely Supplies

Share your procurement plans with your vendors to ensure that they can plan their supply schedule. Vendor tracking, analysis and efficiency checks help you to identify the right person for each item.

An Informed Stock Management Team Efficient Inventory Management

Real time stock information on your complex and high value stock items like diamonds and precious stones will enable your stock team to place orders for the right items at the right time and right quantity. Online stock positions and requirements planning is built into Optimus at every level.

Optimised Marketing Through A Customer Centric Sales Team

Track customer sales data and design efficient product lines. Integrate Product development information with past sales and arrive at effective design concepts for specific customers. Profitability data is available with every customer interaction.
